

Q.17>>swapping without using temporary variable in python.

```
#swap without using temp variable
def swap(a,b):
    a,b=b,a
    print("after swapping the no. is:",a,b)
#main func
a=int(input("enter 1st no.:"))
b=int(input("enter 2nd no.:"))
print("before swapping the no. is:",a,b)
swap(a,b)
```
