

```

#print the sum of all elements in an array
arr = [1, 2, 3, 4, 5];
sum = 0;

#Loop through the array to calculate sum of elements
for i in range(0, len(arr)):
    sum = sum + arr[i];
#as we have not import the array so we cant' use any func of
array

print("Sum of all the elements of an array: " + str(sum));

```
